MARCO SOBRIDO ALVANO

Junior Full-Stack Developer | Computer Engineering Student

Buenos Aires, Argentina | marcosobrido@gmail.com

linkedin.com/in/marco-sobrido | github.com/M4RQUIT0S | m4rquit0s.github.io

PROFILE

Computer Engineering student at UADE building full-stack applications with TypeScript, React, Next.js and PostgreSQL. Developed AgroTrace, a livestock traceability platform with role-based access and offline synchronization, alongside e-commerce applications and hackathon prototypes. Seeking junior software engineering opportunities.

TECHNICAL EXPERIENCE

AgroTrace | Independent Full-Stack Developer

Personal project, built solo | 2025 - Present | Next.js, TypeScript, Supabase, Vercel

- Built and deployed a multi-tenant livestock traceability platform with 3 workspace roles, database-enforced access control, invitations and Google sign-in.
- Implemented local editing with queued writes, retry-based synchronization and audit logging; added regression tests for rejected database writes.
- Developed Web Bluetooth integration for BLE RFID readers, CSV/Excel exports and an initial Playwright integration for a government portal.

SELECTED PROJECTS

E-commerce Storefronts

Independent projects | 2026 | Next.js, React, TypeScript, Supabase, Vercel

- Developed 2 storefronts with server-side price validation and database access controls to protect customer orders.
- Built versioned SQL migrations and integration tests, including a purchase-flow database test rolled back after execution.

Graph Algorithms REST API

UADE coursework, team of 3 | Aug 2026 - Present | Java, Spring Boot, Neo4j, JUnit

- Contributed to a REST API for a 10-node fiber network, implementing graph traversal, shortest-path and spanning-tree algorithms with JUnit validation.

HACKATHONS

Vibefence | Platanus Hack 26

Team project | May 2026 | Python, FastAPI, Next.js, Supabase, Playwright

- Collaborated across implementation tasks to build an AI-agent security prototype with access-control testing and a live dashboard in a 36-hour hackathon.

El Ateneo | Serious Game Hackathon Tourism

Team of 5 | Jul 2026 | Unreal Engine 5, JavaScript

- Created and implemented El Ateneo Grand Splendid's virtual world in Unreal Engine; the team delivered a 3-level browser game prototype.

EDUCATION

Universidad Argentina de la Empresa (UADE) | 2025 - 2030 (expected)

Computer Engineering (Ingeniería en Informática), undergraduate degree in progress.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, Java, SQL

Web and backend: React, Next.js, Node.js, REST APIs, Spring Boot, Tailwind CSS

Data and tools: PostgreSQL, Supabase (Auth, RLS), Neo4j, SQL Server, Git, Linux, Playwright, JUnit, Docker Compose

TRAINING AND LANGUAGES

Red Hat System Administration I (RH124), 2026 | SAP ERP Fundamentals, LinkedIn Learning, 2026

Cambridge B2 First, 2024 | Spanish (native), English (B2)
